

In this issue of MICA NEWS we proudly present the new MICA NM-9000 series

New MICA NM-9000 Battery and SL-RST

MICA introduces a totally new NM-9000 belt battery. Rugged aluminium/polyamide housing with advanced control electronics protect the battery from deep discharge and issue a warning for low charge of the battery by flashing the beam of light. Strong but light weight aluminium construction is equipped with two dependable belt clips made of steel. Lamps are connected to the NM-9000 battery with a fast JP-connector that rotates 360 degrees and avoids twisted cables.

Damaged device or cable often short-circuits the batteries. New NM-9000 includes device short-circuit protection and specific warning light for it.

NM-9000 series is backed with wide choice of chargers: NMC-12 charger, NMCC car charger and NMC-20 table charger.

MICA SL-RST is a new way to attach MICA SL to helmet.

Effective SL-light is used in painting, coating and maintenance tasks. It is also perfect for special tasks in mines, open pits and outdoors operations. SL-lamp is the most powerful yet light weighted helmet/head lamp in the market!

MICA SL comes with a full size reflector and with the 6W and 20W halogen bulbs it gives an extremely powerful and wide light output. With the splash proof switch you can choose which bulb to use and this gives more choice between operating time and light output.

Please don't hesitate to ask for more information!

MICA NMC-20 table charger

In the beginning of 2010 new models are available: half-sized NM-4500 with JP connector and a fixed cable model HL-4500 with LED-bulb and Flexmica cable that we have especially designed for use in harsh environments. Also a special multicharger is under development.

Farewell to bulb changes!

Our HL-800 ATEX is now equipped with ultrabright LED. Please, read more from: www.mica.eu
